

Ellagic Acid Extract

New Discoveries in Cellular Support: Ellagic acid is a phenolic compound found in many fruits, with highest concentrations in meeker red raspberries.

This unique extract is comprised of powerful antioxidants that have been shown to support many positive functions of cellular activity. Studies also suggest ellagic acid may promote DNA integrity.^{††} The actual name for the key component of ellagic acid is ellagitannin.

Our formula delivers 450 ppm of ellagic acid per 1000mg.

We manufacture Ellagic Acid Extract using our cold-press method which preserves the bioavailability (ability to be used by the body) and concentration of protein, ellagitannin and other phenolic antioxidants from red raspberries.

Ellagic acid extract has a rich tan color. The texture is similar to other seed extracts and may vary upon mill size.
